Lust Point Cheat

Here you can make negative points for Jose by the girls

lust_pointsB[number_of_girl] (to show points José has on girls)

Where ## is the number of the girl (from the list) and # is how much you want to increase lust.

Example for Sophia

lust_points[20]+=5 would increase her lust by 5 points

Example for Anna

lust_pointsB[0]-=20 → would lower her lust for Jose -20 points

lust_points[0]+=3 → would increase their lust for you +3 points

----

lust_points[##]+=# → **to add points**

lust_points[##]-=# → **to Subtract points**

Short guide to playing Battle of the Bulges

1. Most important. Makes save often. I have developed the habit to make a save on each 'where should I go' that marks a change of scenery. If you don't like what happens in a scene you can easily go back to the start of the scene that way. This includes rolling back José getting a girl. Don't worry about a limit on number of saves. There are paths where I made over a hundred and had no problems.

2. You can single step actions back by using the <page-up> key (Scrollen on mouse). But the capacity to step back is limited, so for the longer scenes you need a save to go back to the start. Stepping back is handy when you pushed the wrong button, or want to see how a different choice in a menu works out. Note, rolling back does not change the random seed, so if you roll forward again you get the exact same outcome of random factors. To change the random seed you need to do a restore of a save.

3. Using the console. Reach it by typing shift-o (the vowel O, not the number 0). As long as you restrict yourself to just displaying things there is no harm. Beware of changing things, unless you really know what you are doing. Things to look for in the console by typing the word:

- score (the number of points you have collected on all girls. shown at the end of the day as the score)

- girlsfucked (the total number of girls you have reached epiclust with)

- lust_points[number_of_girl] (to show points the MC has on girls)

- lust_pointsB[number_of_girl] (to show points José has on girls)

- lust_points (without the number of girl attached, show points the MC has on all girls)

- lust_pointsB (without the number of girl attached, show points José has on all girls)

For number_of_girl see the list with the girl numbers.
