

This document will help you to update the content of the game with the new content instead of downloading the whole game again.

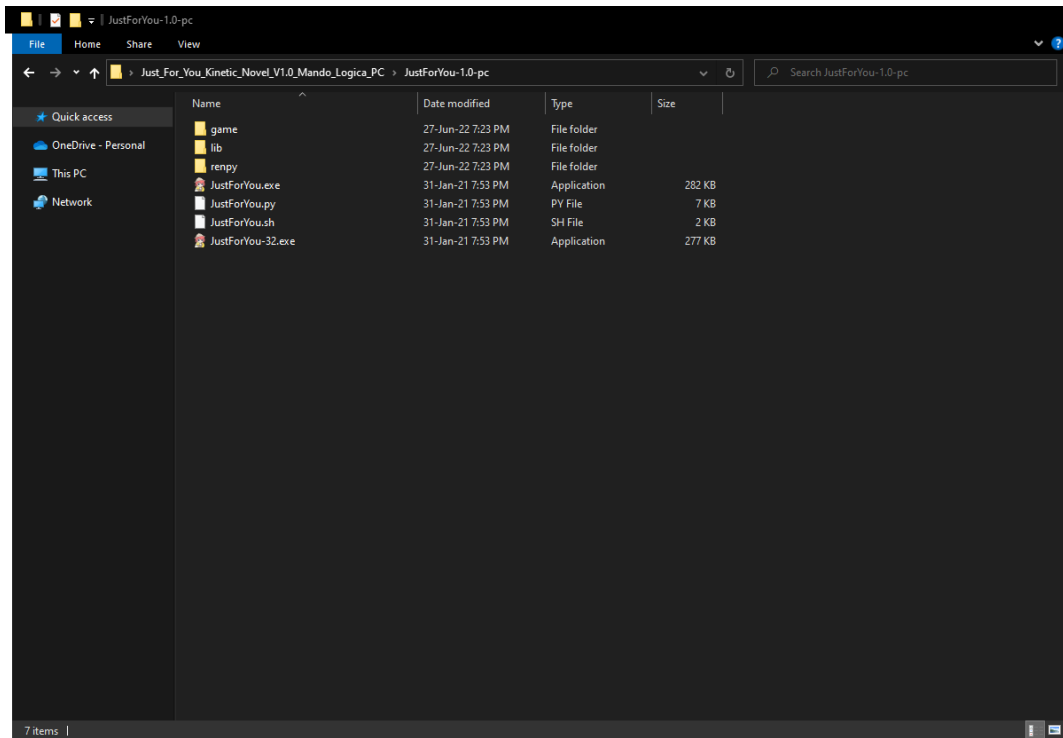

NOTE: In this document, the instructions will be updating the game to version 2. BUT the steps will be the same for any later/new versions.

After downloading the new contents of a new version of the game (Not the full game), you need to do the following to update the game manually. The steps are:

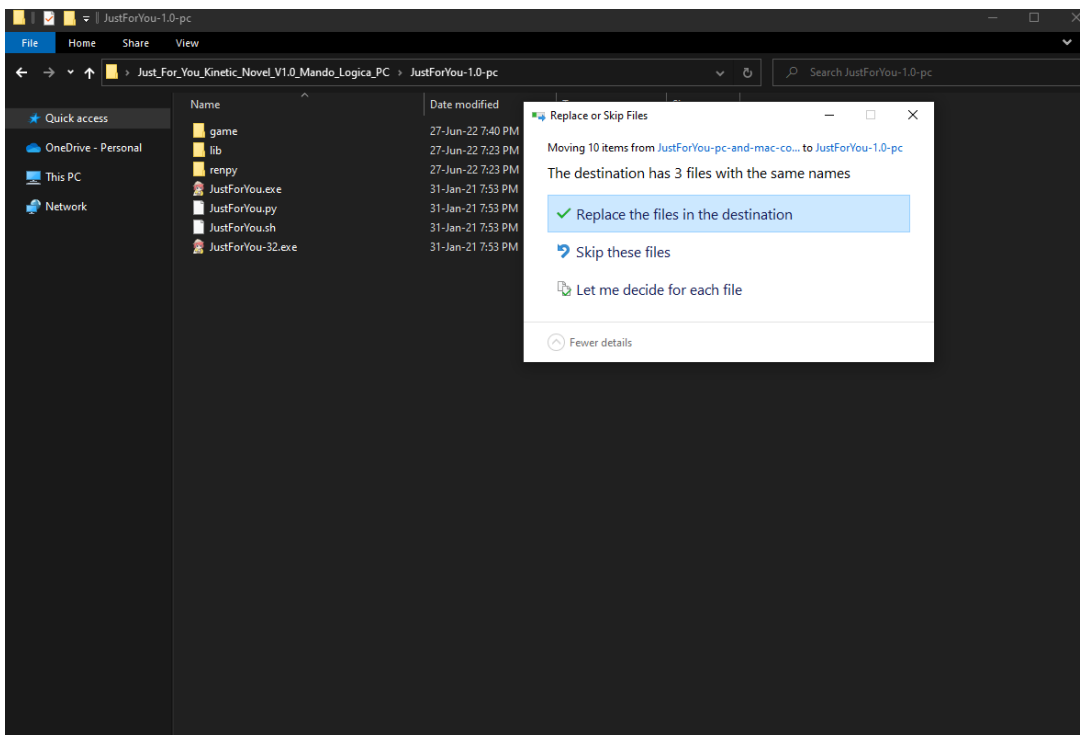

1. Make sure the game is not running.
2. Unzip the downloaded folder
3. Double click on the unzipped folder
4. Copy the folder called “game” as shown in the figure below.

5. Go to the location where the current game is located/installed. Let's assume you located the first version of the game on the desktop. Browse in the folder until you see “game” folder as shown in the figure below.

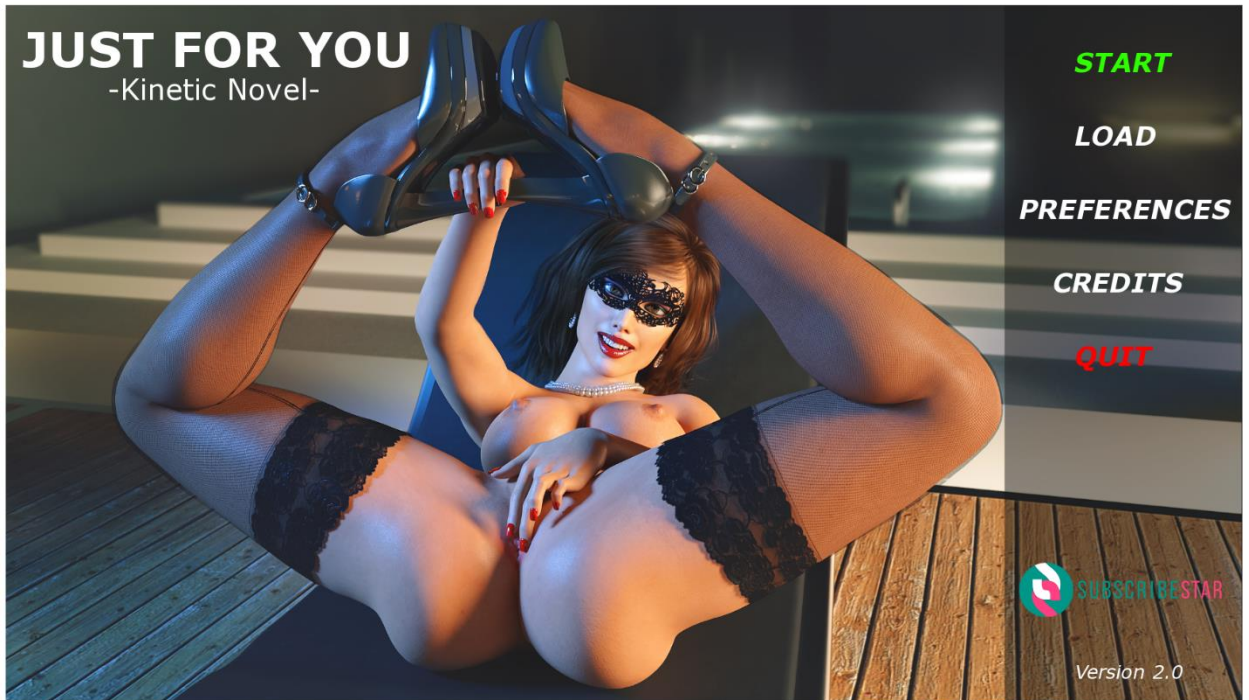

6. Paste the game folder that you copied from the unzipped downloaded folder.

Note: You may get a warning message like the one above. Click on “Replace the files in the destination”

7. Run the game
8. Look at the version of the game. It should be "Version 2.0"

Question: Let's assume that I have version 2 of the game, and the content of version 4 is available, but I **HAVEN'T** updated the game to version 3. What should I do?

Answer: Since the game is still in version 2, you must follow the steps to copy the content of **VERSION 3** **first** and then follow the steps again to copy content of version 4. OR download the full game again.

Thank you so much for your interest in playing the game!

Best regards
