Console Commands

How to enable console commands

With your game closed, start in the game's parent folder, where the game .exe is. Double click on the third folder labeled 'renpy'. Next, double click on the third folder labeled 'common'. Now, scroll down until you find a file named **00console.rpy**. This next step is easier with a text editor like Atom, but Notepad works just fine. If you do not have a program assigned to open this type of file, then right click on **00console.rpy** and select **Open With** or select **Properties**. If you selected **Properties** you need to click on **Change** before we can do the next step. Now select **More Apps** from the Windows popup and scroll down to find Notepad or the text editor of your choice. If you do not see a program you have installed, then select Look for another App on this PC and find the program .exe.

Now that we have a way to read the file, double click on **00console.rpy**. You can either scroll until you find **config.console = False** (line 108 in Atom), or press **Ctrl+F** and type in '**config.console =**' to find it. Change **False** to **True**. I recommend clicking to the left of the 'e' in **False** and pressing backspace 4 times before adding '**Tru**' to it. This seems dumb, but it will minimize you adding or removing spaces, which could cause issues. Now click on File in your program's left corner and select **Save**, or press **Ctrl+S**.

Now you can start your game. Once you begin your playthrough press **Shift+o** to open the console and **ESC** to close. While you're in console, you can enter **long** then **dir()** to get a complete list of commands.

TL/DR:

renpy/common/00console.rpy

Open 00console.rpy

Ctrl+F 'config.console ='

change False to True

Ctrl+S

(in game)Shift + o
