This walkthrough intends to show all the paths through the game in an objective way. Colors and styles are only meant to highlights elements, not influence your decision. There isn't a right or wrong way through the game, only you should decide.

Only decisions that have an impact on the story or your character are shown. There are obviously many scenes that can play differently based on your choices, but "cosmetic" differences or small alterations in the dialogues are not part of this walkthrough.

The PDF is best viewed on a touch screen where it is easy to drag, zoom in and out with the fingers.

On a PC with Acrobat Reader, make sure to use the "hand" icon to easily drag with the mouse. Use *Control* + Mouse wheel to zoom in or out.

Legend

Character and game related attributes that can be increased/decreased (i.e.: a number value) will be represented with an icon followed by the character/description name:  Bubu or  Bubu

More complex values will be written as text instead:
 girls kissed +20

Reference to these values will reuse the same icon or text:
Bubu  is at least 5
girls kissed is at least 25

While the game is being developed, decisions that do not impact the story (yet) will be displayed like this:
 *Granny*
 *grandmas kissed +20*

Icons

: +1 Relationship point : -1 Relationship point

Flow Symbols

 Skip until the next section

Decision labels

When something you do can have an impact later on in the game, a label will be visible where it happens like this
 decide something #123

In some rare cases decisions can be reversed, to distinguish it more easily the label will look like this
 did not decide something #123

References to this label will also include the same number so it is easy to track it down to where it happened (could be multiple places).
decided something #123

While the game is being developed, decisions that do not impact the story (yet) will be displayed like this:
 *agree* #55

Reversed decisions that do not impact the story (yet) will be displayed like this:
 *did not agree* #55

Check the last page of the walkthrough to learn how you can use the developer console to cheat alter their value for your benefit: Cheat without a MOD ([link](#)).

Enjoy the game!

Overview

The walkthrough tries to be linear and some sections should be skipped depending on the listed condition(s).

However sometimes it is necessary to jump ahead to a new section completely and this can make it harder to *see* the flow.

Refer to this overview page to see the big picture.

Cheat without a MOD

So you want to try out a new branch but do not feel like completely starting over a new game?

Don't worry, with the developer console you can easily modify in-game variables. You only need some basic understanding of scripting, no MOD required.

First of all, you need to enable the developer console, if you are lucky it is already enabled, type Shift+O in the game (Hold the SHIFT key and type the letter O). If not, close the game, go to the game directory and either create a file named options.rpy or edit with a simple text editor (e.g.: Notepad) if it already exists. Write the following lines at the end:

```
init python:
    config.developer = True
```

Note: There are 4 spaces before 'config.developer = True'

In many cases the game might start correctly once but crash after that. If that happens delete the file options.rpyc that gets created automatically after starting the game with the file options.rpy present

This can be automated on windows with the following script: Intertwined.cmd with the following content:

```
del game\options.rpyc
start "" "Intertwined.exe"
```

Start the game and load a savegame, type SHIFT+O to open the console and use the ESC key to exit
