PREFACE

This compendium is intended to be a list of great games I have found on the F95 forums that are worthy of attention. Some of them I have played and can fully attest their quality, while some others are great, but not for everyone, and, lastly, I have included some games that, despite not having been played by me, will most likely bring you a great time. As time passes, I'll move games from untested to tested, or remove them if they aren't good enough, and add new games to the compendium. There are some more reasoning at the "Why Bother?" section at the end of this document. This will be posted on zzzchan's /v/ and on a F95 thread by user Shiro Arachne. Almost all games were found on F95, and I made use of their search function to filter content so that I could choose from a pre-selected list without disgusting tags and almost-universally bad engines. Some games were found on Newgrounds and Itch.io too. With this, I am not trying to create a "must play" list or even a "beginner's guide" sort of thing. This is a collection of great hentai games that will make you aroused and entertained, created with the intent of helping others have a good time, by someone that got frustrated with the amount of horrible, soulless content being on the main pages of the forums since ever.

I tried to make this as organized and pleasant to read as possible, which is why I recommend enabling "book view" mode on your PDF reader. Font used: Liberation Serif.

As this was originally supposed to be a collection of tentacle-focused games, the name "Lovecraft Compendium" was chosen. It ended up becoming something much greater in scope, but I couldn't think of a better name so I left it as-is.

There aren't many DOS/PC-98 games (well, there aren't any) as of now because I'm struggling to find good ones.

ORDER AND SECTIONS

Games will be listed in the following order:

Basic order: Content

First order: Status

Second order: Alphabetic

Special: Emulated and Browser games.

Content: V → T1 → T2

Status: Tested → Untested → Subpar

What that means is that they will be first separated by content, then ordered by status, then sorted alphabetically. Lastly, there will be a special category for browser games and those that require emulation.

This document has 2 sections:

Main: Primary section in which games are listed.

Misc: Other information.

CATEGORIES AND LENGTH

Games will be divided in the following categories:

Vanilla (Tier 0): Normal stuff. I tried to put only light-hearted games on this category.

Tier 1: Down-to-Earth tags such as bdsm, femdom, exhibitionism, corruption, and so on. Yaoi, Yuri, Futa content are part of this category.

Tier 2: Less worldly tags such as furry, tentacles, machines, monsters, and so on.

Some games with particularly mild content for their tier might be posted on a lower tier. I tried to categorize them with the idea of “what does this game focus on?”.

@ = Personal Favourites

The length keywords mean:

Very Short: <30 minutes worth of content.

Short: Usually one night worth of content.

Medium: A couple nights.

Long: Many nights.

Note that this is totally subjective, if you skip all the text the game will certainly be much shorter. This might also not be reliable for games with branching plots, or with game overs.

ADDITIONAL INFO

1 – Subpar doesn't mean bad. These games will probably be perfectly enjoyable provided you like the type of game they are. If I found a game to be bad, I wouldn't have added it to this list.

2 – Flash, PC-98 and DOS games require emulators to be playable. There is a list of useful websites and software, including emulators, at the end of this document.

3 – Games on this list will not contain any of these tags: Gore/Guro or excessive bodily harm, Bara, any tags involving repulsive bodily fluids (including blood), Netorare, Real Porn. There are, at most, a couple games that contain censored depictions of gore that are avoidable.

4 – Some types of games that are, for the most part, not covered on this list: 3D CG – Unity (engine) – HTML (Engine) – Java (Engine) – Generic japanese games (Kagura, Wasabi, Alicesoft, etc) – Censored games – Games that need +18 patches – Games that make improper use of assets – Games made by morally questionable devs – Live2D games – Excessively hard games.

5 – Windows-only games might also work on Linux and Mac via Wine, and on Android via Joiplay.

6 – The games are all what you could call Nukiges. That means hentai is the focus, and the plot revolves around it.

7 – I do take suggestions, praise, criticism; you can find my discord contact and F95 username at the end of this document.

8 – Tag order relates to tag power/prevalence. Not all tags are covered, but the most important ones are listed.

ADDITIONAL INFO 2

This is a little list of great file hosting sites I made. It's very useful on F95 where all games must be uploaded to at least 3 different places, but I suppose you can use it for other stuff too. This list was made with the assumption that you are using an ad blocker (Ublock or Umatrix are recommended). While I'm pretty sure the sites on this list don't compress files, always send them as zip, 7zip, rar or similar, for safety, to avoid compression.

Best:

- 1 – Pixeldrain (<https://pixeldrain.com>)
- 2 – Gofile (<https://gofile.io>)
- 3 – Anonfiles (<https://anonfiles.com/>)

Good:

- 4 – Terminal.lc (<https://terminal.lc>)
- 5 – Mega (<https://mega.nz/>)
- 6 – Mediafire (<https://www.mediafire.com/>)
- 7 – Workupload (<https://workupload.com>)

Untested:

- 8 – Dropmefiles <https://dropmefiles.com/>
- 9 – Wormhole (<https://wormhole.app/>)
- 10 – Oshi.at (<https://oshi.at/>)

Alternatively, and these should be the actual best options, you can send stuff via Torrent, Souseek or some p2p service like FilePizza (<https://file.pizza/>). In order to improve download speeds, you could also use a download manager. I don't have any to recommend, because I didn't like any DM I used.

Censored: No

OS: Windows

Type: Adventure, Fantasy, Turn-Based Combat RPG (RPGM)

Length: Long

Language: English, Russian

Version: 0.405.0.1

Notice: This one is quite long. Almost all scenes are anal.

Monster/monster girl content is minimal, which is why I decided not to put it on Tier 2.

II-A, TIER 1 TESTED 5

Title: Witch Hunter

Creator: Lazy Tarts

Tags: male protagonist, corruption, blackmail, drugs, groping, exhibitionism, mind control, prostitution, slave, toys, degradation, blowjob, milf, monster girl

Version: 7.7.2 – 0.1.3.0d

Notice: Breeding Season was the original project, Cloud Meadow is its continuation. Unfortunately Team Nimbus ended up doing a patreon milking scam, instead of properly developing the game, which is now regarded as a failure by most people. Long story. I'd recommend playing Breeding Season first, and then Cloud Meadow which, despite the scammy devs, it's still a decent game with an unique setting.

MISC
SECTION

ENDNOTE – Why Bother?

My first proper hentai game was M.S.A.2.: Rainbowround!, on Newgrounds, but I can clearly remember playing at least a handful other hentai games on my browser when I was younger, like on Facebook when they still allowed that kind of stuff. Back then, I also remember playing those Nutaku ones at random, or any sexy browser game that appeared on an ad while I was browsing rule34 or something. Those games, for the most part, are merely baits/distractions so that you can spend money on micro-transactions, extra scenes, and whatever a horny teen with a credit card can be fooled into paying for. Of course, I didn't pay for any of it at the time, because I had no credit card, but this filthy logic still persists today on Steam, DLSite and Nutaku itself, which unfortunately still hasn't died (among other sites). They will try to make you pay loads of cash for some generic, copy-pasted, machine-translated content, which is usually censored if it comes from Japan. On DLSite, reviews are always at least 4/5, rendering the whole reviewing system useless (similar situation on Steam). This is absolutely vile and disgusting. They will try to make you pay 10, 20 dollars on Steam for a game that could have been very well drawn by my blind great-grandma with a pack of crayons in a moving ship during a thunderstorm. After a handful of purchases on Steam, in an attempt to "support the industry", I finally realized how things really are. It's genuinely baffling how these companies can get away with it, and how blindfolded, completely alienated from actual good content most of those who buy h-games are. To be fair, they shouldn't even be sold – you should pay for them after playing, if you want to; that is, if they satisfied you, as promised. That's because I didn't even mention Sekai Project*. Enough of dollar signs in front of every game you see, this only benefits those that want to deceive you. Enough of disgusting content being given attention to while great games get abandoned. Enough of DRM. Lets have some real fun.

ENDNOTE – Why Bother? 2

* Paraphrasing a document I found on zzzchan's /v/:

Q: "What's Sekai Project and why shouldn't I support them if they're translating VNs I like?"

A: "They are fraudulent, scammy publishers who buy the licenses for IPs that are being fan-translated – because they know people are looking forward to it – just to sit on them for years on end. They are attempting to establish a monopoly on the Visual Novel environment by slowly killing off the fan translation scene. When they finally manage to translate their VN's, they do it at a slower pace than many fan translators and at a lower quality. If that wasn't bad enough, they are well known not to fulfill their Kickstarter promises, such as not adding a +18 version. All in all, supporting Sekai Project is bad for everyone."

The Sekai Project issue is just one amidst many. It's also important not to buy games on Steam, as they might come with DRM, at a higher price due to high % cuts by Steam, and censored. To be honest, you shouldn't buy games at all. Instead, play them for free, and then decide whether or not supporting the dev is a smart idea. As end users, we have to understand that certain platforms are hostile to us. Sites like Steam and DLSite only care about the money, in a way that is detrimental to us, to devs and to games in general. They will feed you algorithm-driven trash so that you can spend more on soulless games. They will censor reviews in order to keep bad or even malicious games selling. Don't be a fool. Support developers in a more direct way, in platforms that take less % cuts and that are friendly, not hostile, to the end user. Itch.io, GoG, Newgrounds are good examples, while SubscribeStar, Boosty, Ko-Fi, LiberaPay stand as alternatives to Patreon.

Final Words:

This would not have been possible without the prolific community at F95ZONE and their precious – and numerous – collection of eroges. Congrats to whoever designed the F95 search function (https://f95zone.to/sam/latest_alpha/#/cat=games/page=1/sort=views), it is splendid.

I'll also make, in the future, a similar compendium regarding hentai artists. And doujin artists too. Eroges are easier to deal with, because they are fewer in number. But I'll get there. With all this, I work for a world where we, not the corporations, control hentai. Until I or the internet dies, whichever comes first.
