[Online Save Editor / Save Editor Online](#)

Console – use at your own risk and pay attention to what you are doing.

Use unren to unlock it or do it manually in any `\renpy\common\console.rpy` and set `config.console = True`

General renpy code

always check the variable before you change it without =

`save_name = u''` ('name' and save again) keep in mind named save stick with you to remove it write initial code without name, or do double save before you name it – works in majority of renpy games.

`+=` add to amount / `-=` reduce it

for any girl stats , boost them when or after you meet them(don't overkill it), wont have any problems that way.

Mod (WT, Cheat,..) – Always goes to “\game” folder, unless said otherwise – read the instruction of each. Also always make sure that mods are updated to current version.

If you cant launch game for any reason and you did play some older version of it always delete “persistent” from both places “\game\saves\” and “AppData\Roaming\RenPy” (or equivalent if you are on other system). That usually solves any launch issues.

Also, if game is crashing and you are using unren console, 1<sup>st</sup> remove from \game folder both `unren-console.rpy/.rpyc` and see, if it does again. It does tend to crash games from time to time.
