Hey, gang. Tribe here...

This is a guide for people who want to convert their videos using Handbrake so they can play in my adult game created with Ren'Py. WebM videos are very universal, so they will be used as an example in this guide. I am in no way affiliated with Handbrake.

I am not a professional video creator, and this guide was created by compiling information from the community following a major discovery made by Toast (a member of my Discord) who discovered the solution to the missing audio problem that has plagued our community since the beginning of this era.

If there are any errors in this guide, please let me know so that I can correct them and improve it further. Good day, and may your faps echo in eternity.

Step 1: Download Handbrake

<u>Click to Download Handbrake</u> or Google: 'Download latest Handbrake version'

After you have downloaded it, open the application and you should see this:

👑 HandBrake		– 0° ×
Source Selection Optionally choose a specific title:	Start Encode Quicue 🔐 Preview 🎆 Achiefy Log 🔃 Prevets 💌	
Then choose the video(s) you'd like to encode: Folder (Batch Scan) Open a folder with one or more files. File Open a single video file.	Angle: Range: Chapters: Image: Duration: Duratidin: <thduratidin:< th=""> <thduratid< td=""><td></td></thduratid<></thduratidin:<>	
Open a single video file.	nies Chapters	
]
	Or drop a file or folder here	
		J
A new version is available! Update Now!		
Cancel		

Step 1.5: Make sure you are using the latest version.

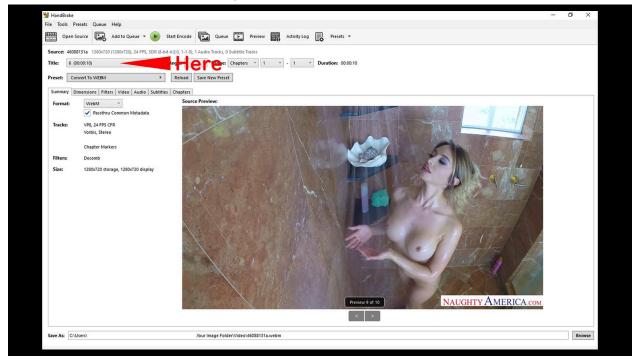

If not, you can click the button shown here:

👑 HandBrake	-	0 X
Source Selection	Start Encode 😱 Queue 📖 Proview 🞇 Activity Log 📙 Presets 📼	
Optionally choose a specific title:	naronone 🚛 dane 🔚 ucus 🖼 vonična 🕅	
Then choose the video(s) you'd like to encode:	Angle: Range: Chapters Duration:	
Folder (Batch Scan) Open a folder with one or more files.	Angee: • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • <td< th=""><th></th></td<>	
File Open a single video file.	Pelaad Swe New Preset	
	Or drop a file or folder here	
Here		
A new version is available!		
Cancel		

Not updating Handbrake and converting files will likely lead to video and audio errors.

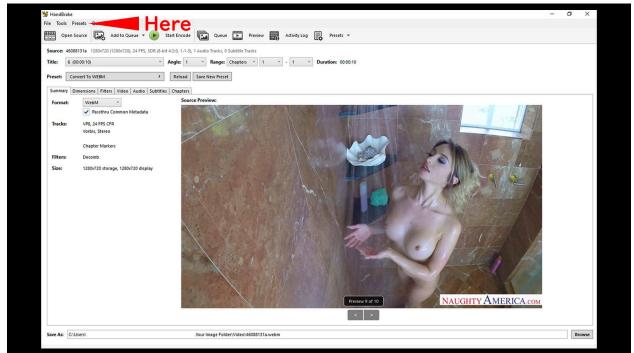

Step 2: Place the file or folder to be converted in the white box that appears by dragging and dropping it there.

Handbrake will present you with a screen containing a wealth of information. It is critical to verify that the target format for the files being converted is WebM, and that the files to be converted are listed in the dropdown menu adjacent to "Title:":

<u>Step 3: Create a preset so you can convert multiple files simultaneously with precision.</u>

Handbrake can convert multiple files to your specifications by creating a preset; otherwise, the program will **revert to its default configuration mid-conversion**. This typically entails the utilization of a codec that lacks compatibility with Ren'Py. You can find this option in multiple places, but you can just go here and choose "Create a preset" afterward:

Step 4: Creating your preset:

You	can name	and	describe	it whatever	you want	but proce	ed to the	next step	before	closing
this	screen:									

Madd Preset		×
Add Pres	et	
Name:		
Description:		
Category:	Custom Presets	*
Resolution Limit:	720p HD v	
Resolution Limit: Audio:	720p HD × Selection Behavior	

What size? Unless you have a high-end computer setup, bigger does not always mean better. Most players experience lag when playing 1080p HD videos or higher. Ren'Py can handle multiple high-resolution videos, but keep your computer's specifications in mind. 720p is a safe choice for almost any occasion. You won't see a girl's pimple arsenal in 480p, but they work well when the video isn't full screen and take **far less space**. Adjust the audio codecs to make the video's codec compatible with WebM. What you want is this:

👹 Add Preset		×
Add Prese	et	
Name:		
Description:		
Category:	Custom Presets	v
Category: Resolution Limit:	Custom Presets 720p HD v	v
		v

Many have had issues in the past with silenced videos, and this is the reason why.

Step 5: Creating a codec preset.

The next screen will display Handbrake's default settings. The default settings are similar to those found in mp4 files, which we don't want. You will need to **change the settings in both red circles**.

Before:

rce Track Selection Selection Behaviour: First Matching	Selected Language 🛛 🗸		'Auto Passthru' Behaviour:	lio cod
Unknown Qafar (Afar) Апсуа бызшәа (Abkhaz) Afrikaans Akan	Move Right Move Left Clear	elected Languages:	Allow passthru of: AAC AC3 E-AC3 TrueHD DTS DTS-HD MP2 MP3 FLAC Opus Fallback encoder: AC3	×
io encoder settings for each chos	sen track: Mixdown	Samplerate DRC	Gain	
AAC (avcode: ~ Bitrate: ~ 160	∨ Stereo	· Auto · 0		0

After:

Irce Track Selecti k Selection Behavio		hing Selec	ted Language	v	'Auto Passthru' Behaviour: When 'Auto Passthru' is selected as the audio code
oose Languages: Available Language				Selected Languages:	Allow passthru of:
(Any) Unknown Qafar (Afar) Агісуа бызшәа (Al Afrikaans Akan	bkhaz)	<	Move Right Move Left Clear		E-AC3 TrueHD DTS DTS-HD MP2 MP3 FLAC ✓ Opus Fallback encoder: Opus ×
dio encoder setti Codec	ngs for each	chosen	track: Mixdown	Samplerate DRC (Gain
		chosen			Gain 0 💭

Renpy is compatible with the following audio codecs:

- Opus
- Vorbis
- MP3
- MP2
- FLAC
- PCM

For silenced video presets, delete the codec entirely and choose none for audio:

		'Auto Passthru' Behaviour:
k Selection Behaviour: First Matching Se ose Languages:	elected Language ×	When 'Auto Passthru' is selected as the audio code Allow passthru of:
Available Languages:	Selected Languages:	AAC AC3
(Any)	Marya Binka	E-AC3 TrueHD DTS DTS-HD
Unknown	Move Right	
Qafar (Afar)	Move Left	FLAC V Opus
Апсуа бызшәа (Abkhaz) Afrikaans	Clear	
Akan		Fallback encoder: Opus *
Codec	Mixdown Samplerate DR	
Opus ° Bitrate: ° 160	Stereo	

Step 6: Saving your preset:

Step 7: Quality Check

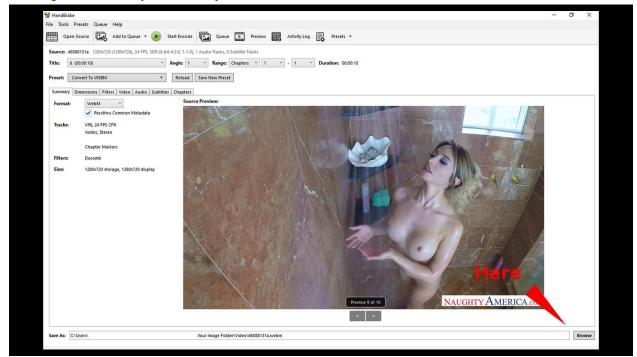

Consider the quality (size) of the files before moving on. Do you want them to take less space? If the quality is barely passable already, lowering the file size may not be the best option. Otherwise, you may adjust the size of the videos here:

HandBrake File Tools Presets	Queue Help		- 0 ×
Open Source	Add to Queue 👻 🛑 Stop 🕕	Pause 🔃 Queue 2 🔛 Preview 🧱 Activity Log 📙 Presets 🕶	
Source: 46088131a	1280x720 (1280x720), 24 FP5, SDR (8-bit 4:2:0, 1-1	5), 1 Audio Tracks, 0 Subtitle Tracks	
Title: 6 (00:00:10	· Angle:	Kange: Chapters 1 1 Duration: 00:00:10	
Preset: 55	Reload	Save New Preset	
	ns Filters Video Audio Subtitles Chapte		
Video:		Quality:	
Video Encoder:	VP8 ~	Constant Quality: 33 CQ	
Framerate (FPS):	24 ~		
	Constant Framerate	Lower Quality	Higher Quality
	Peak Framerate	Avg Bitrate (kbps):	
		Multi-Pass Encoding	
Encoder Options:			
Encoder Preset:	Slower		
		Llaws	
		Here	
Advanced Options:			
Save As: C:\Users'		\Your Image Folder\Video\46088131a.webm	Browse

Dragging it to the left reduces the quality and therefore the file size. Going beyond 40 is probably pushing it, but it ultimately depends on the source material. Play with it outside of fap time.

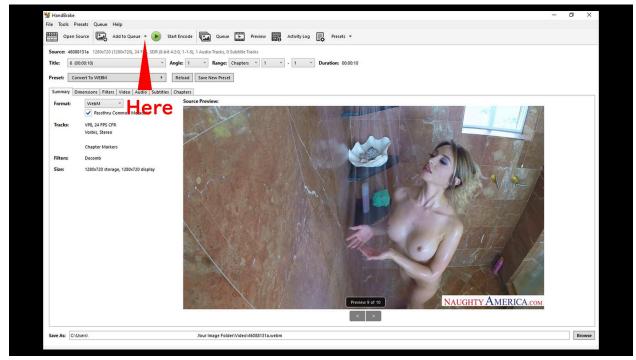

Step 8: Verify output location.

You'll probably only do this once, but you'll need to decide where all of your videos will go. Clicking here allows you to easily select a location and create a folder:

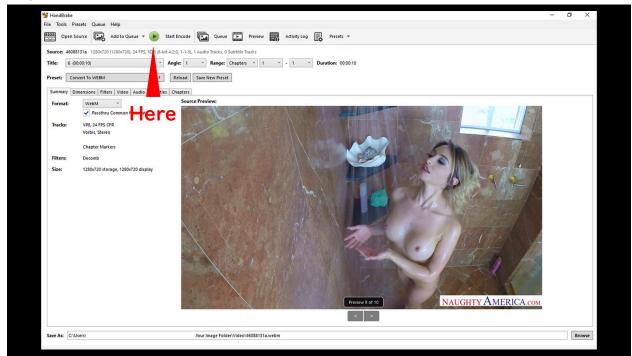

Step 9: Add the files to the queue.

Click the small arrow next to "Add to Queue" and add the entire list to the queue:

Step 10: Let it rip.

Aw yeah boi:

Check the **second video** that has been completed on your list to verify that your settings have been applied to every video.

That's all! Enjoy!
